

Product Announcement: January 25 2006

Lenape Associates, Inc. of Downingtown, Pennsylvania, announces the Lenape Clinical Support Registration & Scheduling System for Clinical Trial Support. System development is expected to be complete in the Spring of 2006, with first deliveries in late summer 2006. Initial customer reaction is positive and preliminary negotiations indicate the first clinical studies using the system may be in full operation by October 2006.

Lenape Associates is pleased to announce, a new on-line Clinical Study support system, called **Registration & Scheduling System (RS² or RS squared)**. This system is designed to enhance the quality of Clinical Studies by providing an easily accessible battery of helpful services directly to the Clinical Investigators and sites over the internet. In the process of providing these services, important information is trapped and directed to the sponsoring organization in an effective and timely fashion.

The first of a family of products, the Registration and Scheduling System (RS²) addresses several quality issues directly and is designed to benefit three groups of people: the site staff, the sponsor's staff and the subjects. It assists all parties at a critical interface in the Clinical Trial where it all comes together... the VISIT... with visit, dosing, exam, test and interview tracking. It will be offered as a Web-based service that interactively supports Clinical Trial Sites, Investigators and Subjects, while enhancing the quality of the data and helping the Trial Sponsor.

These new products will be offered as web-based services either on sponsor web servers or on Lenape's Clinical Services network. The systems are designed to be hassle-free and cost-effective in this environment. Lenape created the system on the DotNet framework to support the Windows environment. Local PCs at the Clinical Trial Site interact heavily with a Database application on a Web and Database Server over the Internet, using multi-layered security to protect sensitive data collected in Clinical Trials as part of Pharmaceutical research.

The system is offered in two packages: The Basic RS² System is the perfect low-cost entry for smaller studies, particularly when manual systems are used as the basic tracking and data collection techniques. The Enhanced RS² System is right for larger studies and sites with multiple protocols or investigators. It is also a great validation tool and supplement to electronic data capture systems.

Lenape Associates, Inc. has supported Pharma & Life Science companies since its founding in 1995. The Registration & Scheduling System follows a tradition of projects, products & services Lenape has provided over the last decade. Additional products are planned to expand these offerings.

Lenape Associates, Inc.
